## Court of Justice

Laws of Physics as the Rule of Law

The Quantum Court of Justice is founded on four current scientific assumptions:

### 1 - Quantum physics.

Quantum entanglement demonstrates that all points (energy/matter) and waves (information) are connected in the spacetime continuum.

Therefore, humans' actions are interconnected throughout their cultural and social experiences, and the behavior of one is the consequence of the behaviors of all.

### 2 - Electromagnetic field.

The memories of a planet is wrapped around it as an electromagnetic field of frequencies of information. Remote Viewing ([www.irva.org](http://www.irva.org)) proves that any past event can be tabbed and retrieved from the fabric of the Earth electromagnetic field, and exposed to anyone.

Therefore, the truth cannot be hidden anymore, and will, sooner or later, prevail.

### 3 - Dark energy & dark matter:

The universe is said to be composed of dark energy/68%, dark matter/27%, and ordinary (baryonic) matter/5%.

Therefore, as our brain can only sense 5% of all existing frequencies, and its current judgements are made without 95% of potential evidences, the benefit of the doubt must rule, and empathy between all parties should always be.

### 4 - Matter & anti-matter:

Matter and anti-matter produce a wonderful amount of energy once they combine. In the same fashion, opposite parties in a court case can produce an amazing amount of energy if they are to chose to embrace each other through the understanding of the three above assumptions. Such energy is seen by the Quantum Court of Justice as a burst of empathy frequencies which are not only going to affect the parties of the court case, but also all existing matter and anti matter in a chain type of reaction of various amplitude depending of the social importance of the case.

Based on the four above scientific assumptions, an offended who has basic evidences of a crime committed against him/her, can opt for a compassionate legal system, and decide for his/her case to be handled by the Quantum Court of Justice. There, the offender is first invited - via a Remote Viewing presentation - to admit that he/she, at his/her quantum and electromagnetic levels, is one with the offended. Such admission then leads to having the offender self-determine his/her penalty, a conciliatory offer to the offended, in accordance with the penalty standards of the legal system where the court case is taking place.

By granting a self-sentencing right to the offender, the offended, through the Quantum Court of Justice, opens the realm of empathy for one another, and contributes to develop a community based on unity rather than on duality.
